VRAJRAJSINH RATHOD

Senior Python Developer | Backend & Full Stack Engineer

London, UK · +44 7741 077264 · rvrajrajsinh@gmail.com · LinkedIn · GitHub · Portfolio

PROFESSIONAL SUMMARY

Senior Python Developer and Full Stack Engineer with 5+ years' experience designing and deploying secure, scalable backend systems across fintech and e-commerce. Currently builds the backend for a loan origination-to-decisioning platform at Roboyo, serving major US clients, covering microservices, REST APIs, financial data pipelines (Pandas/NumPy/PySpark), and compliance-ready workflow automation. Track record of measurable outcomes — sub-200ms API response times, 99.9% uptime across 50k+ daily requests, 35% faster background processing, and 50% faster deployment cycles. Strong across Python, PHP and JavaScript/React, with hands-on cloud delivery on AWS and Azure (Docker, Kubernetes, CI/CD), and growing exposure to agentic AI and LLM-driven workflow automation in enterprise settings. MSc Computer Science (Distinction), University of East London. Enjoys mentoring junior developers and leading code reviews.

TECHNICAL SKILLS

Core Languages: Python 3.x, JavaScript, TypeScript, PHP, SQL, Bash/Shell Scripting

Backend Frameworks: Flask, Django, FastAPI, Node.js, Express.js — REST APIs, GraphQL, WebSockets, microservices

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Data & Pipelines: Pandas, NumPy, PySpark, ETL pipelines, data modelling, reporting automation

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch — query tuning, indexing

Async & Messaging: Celery, Redis, asyncio, event-driven architecture, background job processing

Cloud & DevOps: AWS (EC2, S3, Lambda, RDS, CloudWatch), Microsoft Azure, Docker, Kubernetes, Terraform, Nginx, GitHub Actions, GitLab CI/CD, Linux

AI & Automation: Agentic AI and LLM-aware workflow automation in enterprise processes, applied ML (TensorFlow, scikit-learn)

Testing & Practices: TDD, unit & integration testing, code reviews, Agile/Scrum, SDLC, technical documentation, stakeholder engagement

Tools & Integrations: Git, Postman, Jira, Confluence, Shopify API, Stripe, Twilio, SendGrid, JWT, OAuth 2.0

PROFESSIONAL EXPERIENCE

Senior Python Developer | Roboyo

Sept 2026 – Present

London, UK · Contract

- Build scalable Python microservices and REST APIs for a loan application platform used by major US fintech clients, covering the full flow from origination to decisioning.
- Develop batch and real-time financial data pipelines using **Pandas, NumPy and PySpark** for processing and reporting.
- Containerise services with Docker and deploy via Kubernetes and CI/CD pipelines on AWS/Azure.
- Contribute to early-stage **agentic AI and LLM-aware automation** initiatives within compliance-sensitive loan workflows.
- Lead code reviews and mentor junior developers on secure, maintainable coding practices.
- Partner with data engineers, DevOps, product managers and business analysts in an Agile delivery model.

Independent Projects & Active Search *| Mar 2025 – Sept 2026 — Built independent full-stack projects (including TradeVest, below) while actively interviewing for Senior Python/Backend roles.*

Full Stack Engineer | ROI e-Solutions Ltd

Jan 2024 – Mar 2025

London, UK

- Architected and maintained RESTful APIs in Python and PHP for high-volume production applications processing **50k+ daily requests**, maintaining **99.9% uptime**.
- Designed asynchronous workflows with Celery and Redis for background data processing, cutting job processing time by **35%**.
- Optimised backend performance through refined database queries and caching, improving response times by **30%**.

- Designed secure authentication workflows (OAuth 2.0, JWT), ensuring compliance with data protection regulations.
- Automated deployment pipelines on AWS using Docker and GitHub Actions, cutting manual deployment effort by **50%**.
- Led peer code reviews and mentored junior developers in Agile sprints alongside Product, Engineering and QA.

Software Engineer | Simprosys Infomedia **Jan 2023 – Sept 2023**

Ahmedabad, India

- Built backend integrations with Shopify and Wix APIs, enabling seamless product sync, order management and webhook event handling.
- Improved API throughput by **28%** through asynchronous programming with asyncio, Redis caching and targeted SQL optimisation.
- Automated build and deployment workflows using Docker and GitLab CI/CD, cutting release time to **under 20 minutes**.

Python Developer | Vinara Solutions **Jan 2020 – Dec 2022**

Ahmedabad, India

- Developed Python backend services supporting order lifecycle, catalogue management and user operations for B2B platforms with **20k+ active users**.
- Designed RESTful endpoints and relational database schemas; optimised SQL queries, cutting average execution time by **20%**.
- Participated actively in code reviews, debugging and production support, helping reduce recurring bug rates by **15%**.

KEY PROJECTS

TradeVest — AI Stock Prediction Platform — *Python · FastAPI · React · Node.js · MongoDB · WebSockets*

- Engineered an XGBoost-powered prediction engine trained on 10 years of market data across 9,457+ global equities, achieving **73.42% directional accuracy**.
- Built a full-stack platform with a React frontend, Node.js middleware and a FastAPI ML service backed by MongoDB Atlas, streaming live data via WebSockets.
- Deployed a decoupled microservice architecture across Vercel and Render with JWT authentication, achieving **sub-100ms latency**.

LetMeKnow — Mobile E-Commerce Backend — *Python · Flask · MongoDB · AWS · Stripe*

- Built a production-grade Flask/MongoDB backend supporting multi-vendor listings, cart management and real-time order tracking.
- Implemented JWT authentication, S3-based media pipelines and Stripe payment flows — reducing checkout failures by **25%**.
- Optimised MongoDB queries and indexing, improving search response time by **60%** and user engagement by **40%**.

Shoptronics — eCommerce Web Portal — *Python · Shopify API · PostgreSQL*

- Built RESTful APIs for accounts, catalogues and order lifecycle management, handling **10k+ daily transactions**.
- Integrated Shopify APIs for real-time inventory and order sync, cutting reconciliation errors by **30%**.

EDUCATION

MSc Computer Science — Distinction **Sept 2023 – Sept 2024**

University of East London · Dissertation: Alzheimer's Detection via Machine Learning (83%) · Modules: Machine Learning, Deep Learning, Big Data, Cloud Computing, AI & Machine Vision, Software Engineering

BEng Computer Engineering — Distinction **Aug 2019 – Aug 2022**

Gujarat Technological University, India · CGPA: 7.2/10 · Modules: Data Structures & Algorithms, DBMS, Machine Learning, AI, Linear Algebra, Statistics

CERTIFICATIONS

AWS Cloud Foundations (2024) · MATLAB Deep Learning (2024) · Image Processing (2024) · Machine Learning (2024)

Open to hybrid and on-site roles in London · References available on request
